1. INTRODUCTION

PianoVerse – Piano Practice Tracker and Lesson Booking Application

PianoVerse is a web-based application developed using Zoho Creator to help students manage their piano practice activities and book piano lessons easily. The application provides a simple and user-friendly platform for recording practice details and maintaining lesson booking information.

The application consists of two main forms: Practice Tracker and Lesson Booking. The Practice Tracker allows students to record their piano piece and practice duration. The Lesson Booking form allows students to enter their details, select a lesson date, and track the booking status.

The application also includes reports to view submitted records and workflows to automate actions when forms are submitted. A home page provides an organized starting point for accessing the application's features.

The main aim of PianoVerse is to make piano practice tracking and lesson booking easier, more organized, and convenient for students through a low-code development platform.

2. ABSTRACT

PianoVerse – Piano Practice Tracker and Lesson Booking Application

PianoVerse is a low-code application developed using Zoho Creator to simplify piano practice tracking and lesson booking. The application helps students record their daily practice activities, maintain piano piece details, and submit lesson booking requests.

The system contains two forms, Practice Tracker and Lesson Booking, along with two reports to view and manage submitted information. It also includes two workflows that execute actions when practice records and lesson bookings are submitted.

The application provides a simple and organized way to manage piano practice and lesson details. By using Zoho Creator, the project reduces manual record keeping and demonstrates how low-code technology can be used to develop useful applications efficiently.

3. OBJECTIVES

The main objectives of the PianoVerse application are:

1. To Track Piano Practice: To help students record their piano pieces and daily practice duration.

2. To Manage Lesson Bookings: To provide a simple way for students to submit piano lesson booking details and select a lesson date.

3. To Maintain Records: To store practice and lesson booking information using Zoho Creator forms.

4. To Generate Reports: To display submitted records through reports for easy viewing and management.

5. To Automate Actions: To use workflows that execute actions after successful form submissions.

4. PROCEDURE

The PianoVerse application was developed using Zoho Creator by following these steps :-

Step 1: Application Creation

A new application named PianoVerse was created in Zoho Creator using the blank application option.

Step 2: Form Creation

Two forms were created to collect information:

- Practice Tracker: Collects student name, piano piece, and practice duration in minutes.
- Lesson Booking: Collects student name, lesson date, and lesson status.

Step 3: Report Creation

Reports were created for both forms to display and manage submitted practice records and lesson booking details.

Step 4: Workflow Creation

Two workflows were configured to execute actions after successful form submissions. One workflow is for practice records, and the other is for lesson bookings.

Step 5: Home Page Creation

A home page named PianoVerse Home was created to provide an organized starting point for the application.

Step 6: Application Testing

The forms were tested by entering sample details and submitting them. The reports were checked to verify that the submitted records were saved correctly.

Step 7: Final Verification

The forms, reports, workflows, and home page were checked to ensure that the application was configured properly.

5. APPLICATION TESTING

Application testing was performed to verify the basic functionality of the PianoVerse application developed using Zoho Creator. The forms, reports, and workflows were checked to ensure that the application worked as expected.

Test Case 1: Practice Tracker Form

The Practice Tracker form was tested by entering the student name, piano piece, and practice duration. The form was submitted, and the record was checked in the Practice Tracker report.

Test Case 2: Lesson Booking Form

The Lesson Booking form was tested by entering the student name, lesson date, and lesson status. The booking was submitted, and the record was checked in the Lesson Booking report.

Test Case 3: Reports

Both reports were checked to verify that the submitted records were displayed correctly.

Test Case 4: Workflow Automation

Both workflows were checked to confirm that they were configured for successful form submissions.

Test Case 5: Home Page

The PianoVerse Home page was checked to ensure that it was saved and accessible.

Testing Result:

The forms were successfully submitted, and the submitted records appeared in their respective reports. The workflows were configured, and the home page was created. These tests verified the basic functionality of the PianoVerse application.

6. RESULTS

The PianoVerse application was successfully developed using Zoho Creator. The application provides a simple platform for managing piano practice activities and lesson bookings.

The following results were achieved:

1. Practice Tracker: Students can enter their names, piano pieces, and practice duration.

2. Lesson Booking: Students can submit lesson booking details, including the lesson date and booking status.

3. Reports: Two reports were created to display submitted practice records and lesson booking information.

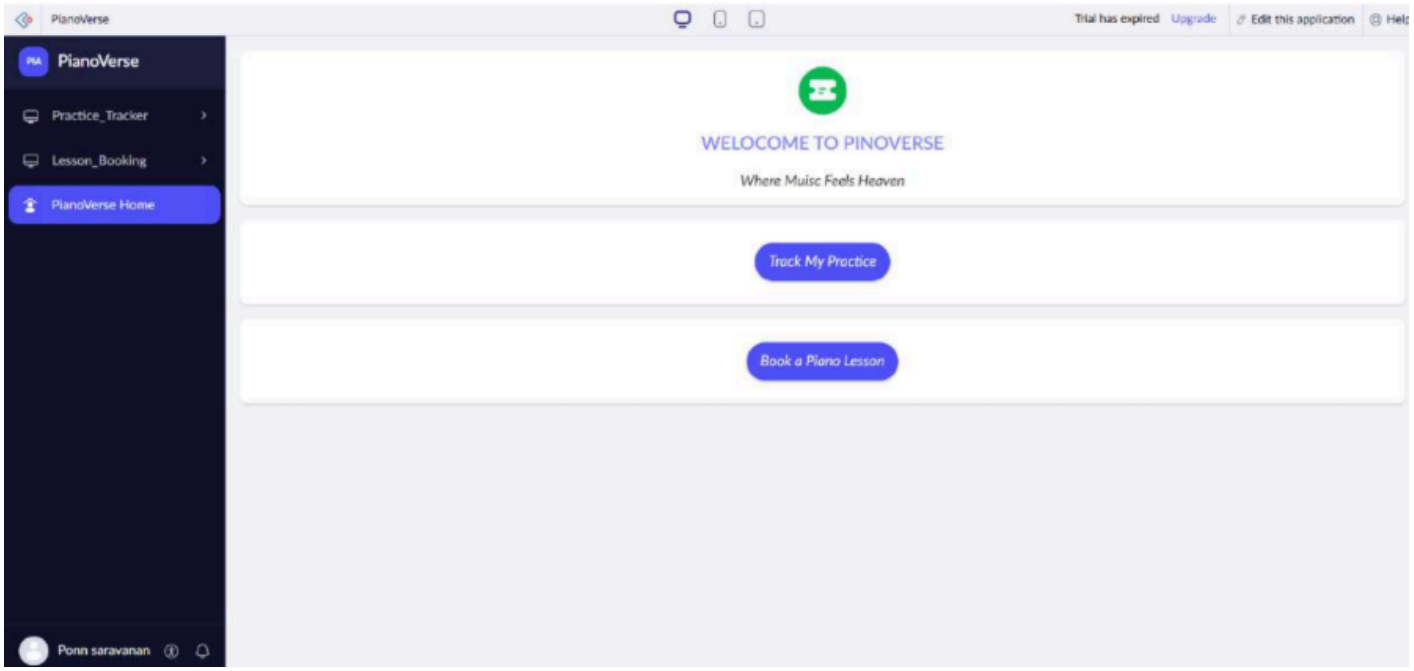

4. Workflow Automation: Two workflows were configured to execute actions after successful form submissions.

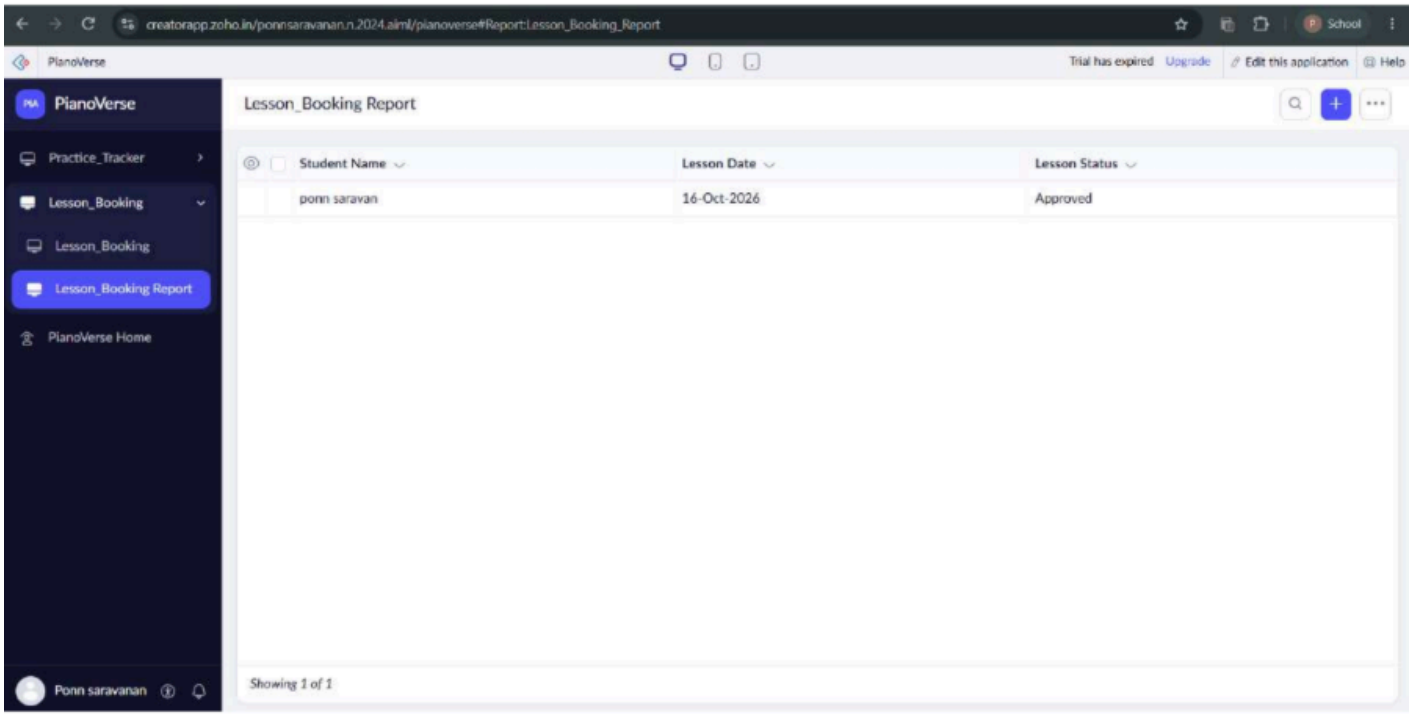

5. Home Page: A home page named PianoVerse Home was created to provide an organized starting point for the application.

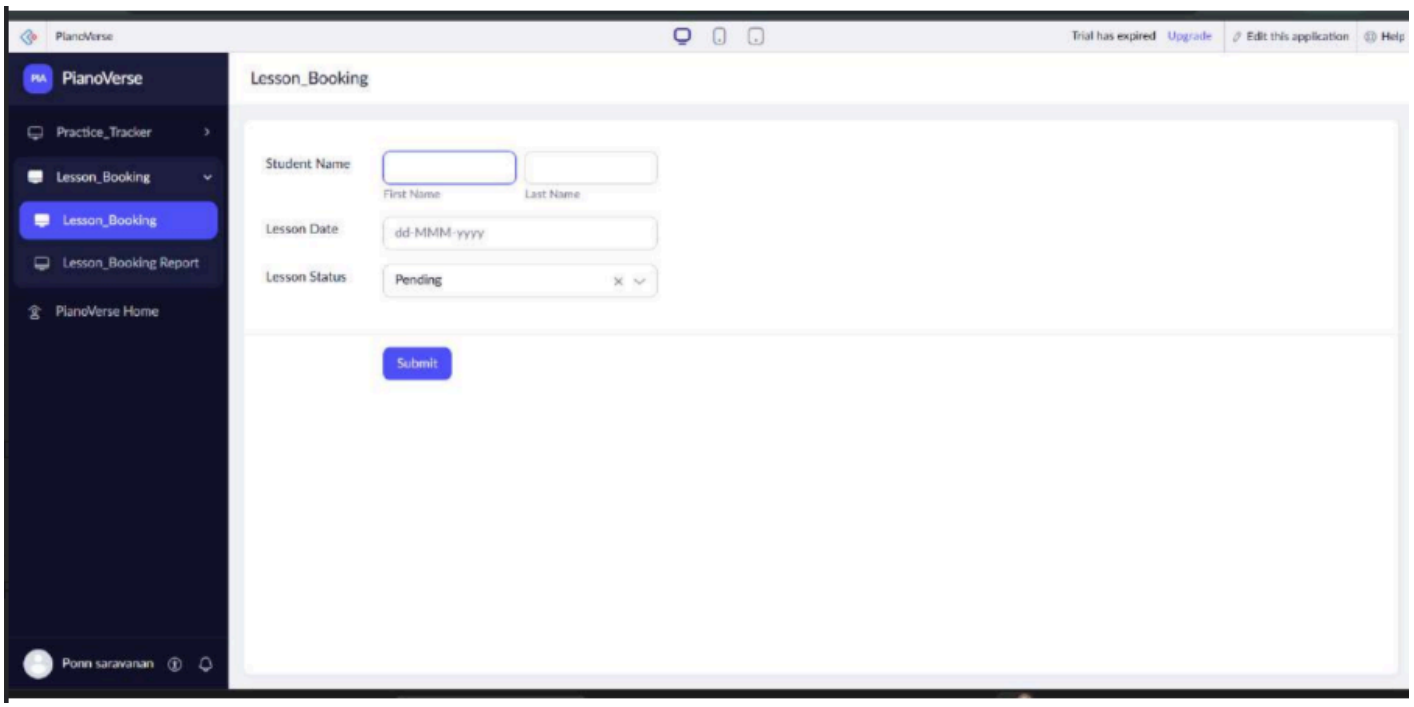

6. Data Verification: Submitted records were checked and displayed in their respective reports.

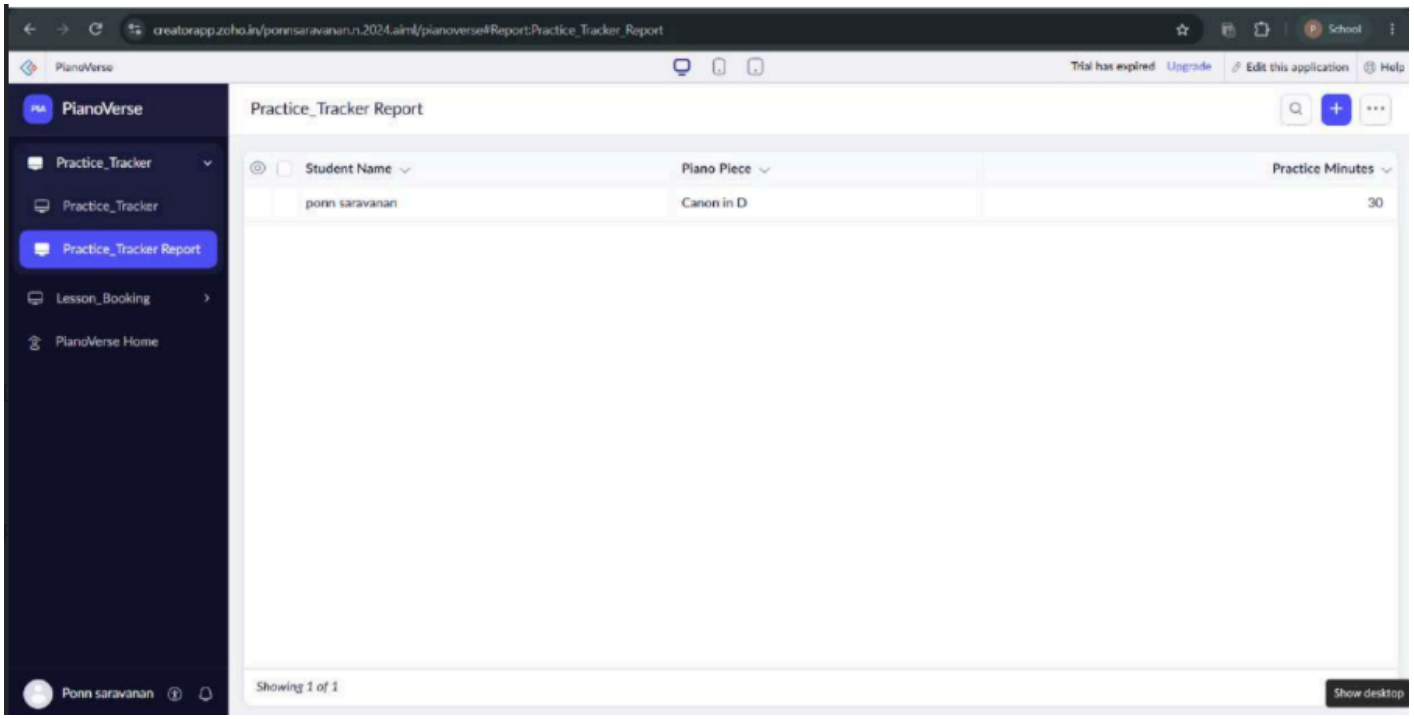

The testing confirmed that the forms could be submitted and the records were stored and displayed in the reports. Thus, the main objectives of the PianoVerse project were achieved.

Output: The PianoVerse application

7. CONCLUSION

The PianoVerse application was successfully developed using Zoho Creator to simplify piano practice tracking and lesson booking. The project includes two forms, two reports, two workflows, and a home page.

The Practice Tracker helps students record their piano practice details, while the Lesson Booking form allows them to submit lesson booking information. The reports provide an easy way to view submitted records, and the workflows demonstrate basic automation in the application.

This project provided practical knowledge of low-code application development, form creation, report generation, and workflow configuration using Zoho Creator.

In conclusion, PianoVerse is a simple and useful application that helps organize piano practice and lesson booking activities. In the future, the application can be enhanced with user login, practice progress charts, automated notifications, and online lesson scheduling.
